BETHLEM HOSPITAL.

REPORT.

To the Right Worshipful the President, the Worshipful the Treasurer, and the Governors of the Royal Hospital of Bethlem.

My Lords and Gentlemen,

In conformity with annual practice, we lay before you the results of the year 1851, which, though on a smaller scale than in some preceding years, will yet be found to be interesting to those who preside over the interests of the Hospital.

There is, however, an unavoidable monotony attaching to statistics of this nature which it is difficult altogether to avoid.

The number of curable patients admitted during the year was 286, consisting of 112 males, and 174 females.

The number of patients of this class remaining in the Hospital at the close of the preceding year, including those out on leave, was 198.

There is a considerable diminution of admissions during the year 1851, which is well accounted for, by the consideration that numerous County Asylums have been erected, and are in progress, in many parts of the kingdom, which will necessarily diminish, in a material degree, the applications for admission into this and all similar Institutions.

CURED.

The number of patients of this class discharged cured during the year has been 121, consisting of 52 males, and 69 females; being below the usual average—a point which has been considerably influenced by the reduced number of the cases under treatment.

Ten have been discharged at the request of friends, 5 of each sex, and 7 as disqualified by Paralysis and other affections. And here we cannot but appreciate and admire the charitable course at present adopted, of retaining a considerable number of such sufferers in spite of their incapacitating maladies: at the same time, such a course will materially affect the relative proportion of cures and deaths.

No just comparison can be instituted between the last year and the preceding one, inasmuch as the year 1850 was unprecedented in the number of patients under treatment, and in the number of cures.

UNCURED.

The uncured have been 102 this year, consisting of 36 males, and 66 females.

DEATHS.

The number of curable patients who have died has been 26, viz., 9 males, and 17 females: and as compared with the preceding year they are 5 fewer. If compared with the numbers of cases under treatment, the proportion will not vary materially. One great cause of mortality will be found to arise from the charitable admission of aged and weak patients, who, perhaps, are not strictly admissible at all, but the Governors are loth to reject, when any, even the least hope of a beneficial result may be anticipated. Annexed is a Table explanatory of the deaths.—

PARTICULARS OF PATIENTS who have DIED during the year 1851, as Reported by the Physicians to the Bethlem Sub-Committee.

	Sex.	Age.	Condition.	Admitted.	Died.	Cause of Death.
1	Female	49	Curable..	3rd Jan. 1851 ..	8th Jan. 1851	Apoplexy.
2	Female	51	Curable..	18th Oct. 1850 .	9th Jan.	Paralysis.

HEALTH.

No epidemic of any importance has prevailed in the Hospital during the last year.

The deaths which have arisen depend on mere isolated causes attaching to each particnlar case.

Upon the whole, considering the amount of mental disturbance, it may be said that the bodily ailments have been few.

GENERAL TREATMENT.

Many improvements have taken place with regard to the cheerfulness of the wards, especially by enlarging the windows in the basement, which gives a much more agreeable air than heretofore to this part of the Hospital. The fire-places have also been improved, and as far as the comfort and appearance go, are much more appropriate. But great care will be necessary to prevent accidents, especially on the female side, as the frequent negligence of sane persons with reference to this risk, is of course, materially increased in those who are labouring under mental incapacity.

Several side rooms, of large dimensions, have been added to the previous accomodation of the patients, which are of a very airy and spacious character, and constitute a very agreeable addition to their comfort.

The use of knives and forks has been continued without any accidents.

A new airing-ground for the use of the basement patients on the male side is very serviceable, as detaching the worst cases from the more orderly, and thereby insuring the comfort of such as are well disposed. The new ground is not very large, and is rather too much exposed to the gaze of neighbouring windows, but still it is a valuable addition.

CLASSIFICATION OF PATIENTS.

Every opportunity of sub-dividing the different grades of cases is sedulously attended to, within doors as well as without, and what has been already stated about additional apartments and airing-grounds will shew the beneficial improvements which have taken place in these respects.

PUPILS.

There have been latterly a few pupils in attendance, but their main object, with a few exceptions, appears to be, the obtaining a certificate of competence to superintend a County Asylum, or some fleeting object of the day; any steady pursuit of a real knowledge of the nature and treatment of insanity is a rare circumstance, and scarcely to be expected among the multifarious objects which necessarily distract the attention of medical students.

AMUSEMENTS.

Much time is devoted by a large proportion of patients to various occupations, and the needle-rooms on the female side have been multiplied.

Now and then a piano enlivens the scene. The men are, many of them, engaged in the gardens and galleries, and a few in the shops. The average number of patients in employment has been $243\frac{215}{311}$.

DIVINE SERVICE.

The average number attending chapel has been $132\frac{14}{48}$.

RESTRAINT.

The amount of seclusion has been very small, amounting only to $\frac{126}{365}$.

Occasional seclusion of clamorous or violent patients has been adopted, as preferable to any other mode,

and it has been very beneficial in some instances. In point of fact, there has been *no* mechanical restraint exercised throughout the year, but simply occasional retirement of unruly cases.

INCURABLES.

On the 31st December, 1851, the number of patients of this class was 75, consisting of 38 males, and 37 females. During the year there have been admitted 3 males and 3 females, making 6.

There have died one of each sex.

One male has been discharged cured after a few years residence, and is in a promising state of mind.

Three patients only still remain of the old Hospital.

CRIMINALS.

The number of criminal patients admitted during the year has been 13 males and 1 female, making 14 in all.

There have died 2 males.

There have been discharged cured 3 males and 1 female, by order of the Secretary of State; and 12 males have been removed, by the same authority, to an institution in the country, being the more harmless order of patients.

There remained at the close of the year 1851, 82 males and 19 females, total 101, being 4 fewer than the preceding year.

We have the honour to be,

My Lords and Gentlemen,

Your faithful Servants,

Ed. Thos. Monro, M.D.

Alex. Morison, M.D.

24th Jan. 1852.

		£475	0	0

The Hospital is repaid by Government, on account of Criminal Lunatics, the wages of seven male and two female attendants, with an allowance of £35 per annum each for maintenance and clothing.

The wages of male attendants commence at any amount not exceeding £20 per annum, and after they are raised to £20, they increase, if their conduct be satisfactory, £1 for the second and third years, and £1 10*s.* yearly afterwards, until they become £40 per annum, after which no further increase is allowed. Female attendants commence at any amount not exceeding £18 per annum, and after they are raised to £18, they increase with like restriction £1 yearly until they become £25 per annum, after which no further increase is allowed. The wages of male attendants were permitted, previous to the year 1841, to increase to £60 per annum.
